A, Title: Structure, genomic organization, and expression of the human interleukin-8 receptive number: A53611; MUID:94209273; PMID:7512557
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          A.Residues: 6-360 <MUR>

                                               Interleukin-8 receptor, high affinity - rabbit
Nylternate names: fMLP receptor
C)species: Oryctolagus cuniculus (domestic rabbit)
C)species: Oryctolagus cuniculus (domestic rabbit)
C)species: Oryctolagus cuniculus
C)stacession: A23669
R)Thomas, K.M.; Pyun, H.Y.; Navarro, J.
R) Thomas, K.M.; Pyun, H.Y.; Navarro, J.
A) Reference number: A23669; MUID:91056034; PMID:1700779
A) Title: Molecular cloning of the fMet-Leu-Phe receptor from neutrophils.
A) Reference number: A23669; MUID:91056034; PMID:1700779
A) Residues: 1-354 < THO>
C) Superfamily: Vertebrate rhodopsin
C) Superfamily: Vertebrate rhodopsin
C) Keywords: G protein-coupled receptor; glycoprotein; membrane protein; neutrophil

Submitted (JUL-1998) to the EMBL/GenBank/DDBJ databases.

-!- FUNCTION: Receptor for a C-C type chemokine. Binds to MIP-1-alpha,

MIP-1-beta and RANTES and subsequently transduces a signal by
increasing the intracellular calcium ions level. May play a role
in the control of granulocytic lineage proliferation or

differentiation.
-!- SUBCELIULAR LOCATION: Integral membrane protein.
-!- SIMILARITY: Belongs to family 1 of G-protein coupled receptors. and mice Eukaryota, Metazoa; Chordata; Craniata; Vertebrata; Euteleostomi; Mammalia; Eutheria; Primates; Catarrhini; Cercopithecidae; Cercopithecinae; Cercopithecus. TISSUE=Kidney;

-!- FUNCTION: Receptor for a C-C type chemokine. Binds to MIP-1-alpha, MIP-1-beta and RANTES and subsequently transduces a signal by increasing the intracellular calcium ions level. May play a role in the control of granulocytic lineage proliferation or differentiation.
                                                                                                                                                                                                                                                                                                                                                                                                                Gaps

Mol. Biol. Evol. 16:1145-1134 (1999).

-!- FUNCTION: Receptor for a C-C type chemokine. Binds to MIP-1-alpha,

MIP-1-beta and RANTES and subsequently transduces a signal by

increasing the intracellular calcium ions level. May play a role

in the control of granulocytic lineage proliferation or

differentiation.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Gaps

-!- FUNCTION: Receptor for a C-C type chemokine. Binds to MIP-1-alpha,
MIP-1-beta and RANTES and subsequently transduces a signal by
increasing the intracellular calcium ions level. May play a role
in the control of granulocytic lineage proliferation or
                                                                                                                                                                                                                                                                                                                                                                                                          Gaps

-!- FUNCTION: Receptor for a C-C type chemokine. Binds to MIP-1-alpha,
MIP-1-beta and RANTES and subsequently transduces a signal by
increasing the intracellular calcium tons level. May play a role
in the control of granulocytic lineage proliferation or

Zequence evolution of the CCR5 chemokine receptor gene in primates.";
Mol. Biol. Evol. 16:1145-1154(1999).
-!- FUNCTION: Receptor for a C-C type chemokine. Binds to MIP-1-alpha,
MIP-1-beta and RANTES and subsequently transduces a signal by
increasing the intracellular calcium ions level. May play a role
in the control of granulocytic lineage proliferation or
differentiation.

Zhang Y.-W., Ryder O.A., Zhang Y.-P.;

Saquence evolution of the CCR5 chemokine receptor gene in primates.";

Mol. Biol. Evol. 16:1145-1154 (1999).

-! FUNCTION: Receptor for a C-C type chemokine. Binds to MIP-1-alpha,

MIP-1-beta and RAMTES and subsequently transduces a signal by

increasing the intracellular calcium ions level. May play a role

in the control of granulocytic lineage proliferation or

differentiation.

-! SUBCELIULAR LOCATION: Integral membrane protein.

-! SIMILARITY: Belongs to family 1 of G-protein coupled receptors.
                                                                                                                                                                                                           Trachypithecus francoisi (Francois' langur) (Indochinese langur).

Bvol. 16:1145-1154(1999).
FINCTION: Receptor for a C-C type chemokine. Binds to MIP-1-alpha, MIP-1-beta and RANTES and subsequently transduces a signal by increasing the intracellular calcium ions level. May play a role in the control of granulocytic lineage proliferation or

"Chemokine receptor expression in cultured glia and rat experimental
allergic encephaloweptitis.";
J. Neuroimmunol. 86:1-12(198).
-!- FUNCTION: Receptor for a C-C type chemokine. Binds to MIP-1-alpha,
MIP-1-beta and RANTES and subsequently transduces a signal by
increasing the intracellular calcium ions level.
-!- SUBCELLULAR LOCATION: Integral membrane protein.
-!- SUBCELLULAR LOCATION: Integral membrane protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                         Rattus norvegicus (Rat).

PROMAIN: 33 G I (POTENTIAL).
Guo B., Kuno K., Harada A., Mateushima K.;
Submitted (JAN-1997) to the EMBL/GenBank/DDBJ databases.
-!- FUNCTION: Receptor for a C-C type chemokine. Binds to MIP-1-alpha,
-!- FUNCTION: Receptor for and subsequently transduces a signal by
increasing the intracellular calcium ions level.
-!- SUBCELJULAR LOCATION: Integral membrane protein.
-!- SUBCELJULAR LOCATION: Integral membrane protein.
-!- TISSUE SPECIFICITY: Detected in monocyte/macrophage cell lines,
but not in nonhematopolatic cell lines.
-!- SIMILARITY: Belongs to family 1 of G-protein coupled receptors.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             BY SIMILARITY.

J. PUNCTION: Receptor for the MCP-1 (JE), MCP-3 (FIC) and MCP-5
Cohemickines. Transduces a signal by increasing the intracellular
Calcium ions level.
Calcium ions level.
J. SUBCELLULAR LOCATION: Integral membrane protein.
J. TISSUE SPECIFICITY: Detected in monocyte/macrophage cell lines,
Dut not in nonhematopoletic cell lines.
Chemistry: Belongs to family 1 of G-protein coupled receptors.
                                                                                                                                                                                                                                                                                                                                                                "Molecular cloning and functional expression of murine JE (monocyte chemoattractant protein 1) and murine macrophage inflammatory protein lalpha receptors: evidence for two closely linked C-C chemokine

-!- INDUCTION: In animals in which experimental allergic
encephalomyelitis (EAB) has been induced.
-!- SIMILARITY: Belongs to family 1 of G-protein coupled receptors.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      ..

-!- FUNCTION: Receptor for the MCP-1, MCP-3 and MCP-4 chemokines.
Transduces a signal by increasing the intracellular calcium ions
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              16-OCT-2001 (Rel. 40, Last sequence update)

8-PEB-2003 (Rel. 41, Last annotation update)

C-C chemokine receptor type 2 (C-C CRR-2) (CCR-2) (CCR2)

(Monocyte chemoattractant protein 1 receptor) (MCP-1-R).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            ISOIG-018793-2; Sequence=Not described;
-!- SIMILARITY: Belongs to family 1 of G-protein coupled receptors.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         MEDLINE=21354176; PubMed=11461684;

SOL N., Treboute C., Gomas E., Ferchal F., Alizon M.;
Submitted (UUL-1997) to the EMBL/GenBank/DDBJ databases.
-!- FUNCTION: Receptor for a C-C type chemokine. Binds to eotaxin,
MCP-3, MCP-4 and RANTES and subsequently transduces a signal by
increasing the intracellular calcium ions level.
-!- SUBCELLULAR LOCATION: Integral membrane protein.
-!- SIMILARITY: Belongs to family 1 of G-protein coupled receptors.
                                                                                                                                                                                             EMBL; AF013958; AAD11572.1; -.

L., Murphy P.M.;

"Cloning and differential tissue-specific expression of three mouse "Cloning and differential tissue-specific expression of three mouse beta chemokine receptor-like genes, including the gene for a functional macrophage inflammatory protein-1 alpha receptor.";

J. Blol. Chem. 270:17494-17501(1995).

-I. FUNCTION: Receptor for a C-C type chemokine. Binds to eotaxin, MCP-3, MCP-4 and RANTES and subsequently transduces a signal by increasing the intracellular calcium ions level.

-I. SUBCELLULAR LOCATION: Integral membrane protein.

-I. TISSUE SPECIFICITY: Detected in skeletal muscle and in trace
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            "Molecular characterization of two murine eosinophil beta chemokine
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        amounts in Leukocytes.

Submitted (JAN-1998) to the EMBL/GenBank/DDBJ databases.
-!- FUNCTION: Receptor for a C-C type chemokine. Binds to eotaxin,
MCP-3, MCP-4 and RANTES and subsequently transduces a signal by
increasing the intracellular calcium ions level (By similarity).
-!- SUBCELLULAR LOCATION: Integral membrane protein.
-!- TISSUE SPECIFICITY: Expressed in spleen but not in astrocytes or
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         -!- SIMILARITY: Belongs to family 1 of G-protein coupled receptors.
                                                                                                                                                                                                                                                                                        30-MAY-2000 (Rel. 39, Created)

AIDS Res. Hum. Retroviruses 17:981-986(2001).
-!- FUNCTION: Receptor for the chemokines SCYA1/I-309, SCYA4/MIP-1-beta and SCYA1/T/TARC. May regulate monocyte chemotaxis and thymic cell line apoptosis (By similarity).
-!- SUBCELIUTAR LOCATION: Integral membrane protein.
-!- SIMILARITY: Belongs to family 1 of G-protein coupled receptors.

-!- FUNCTION: Receptor for a C-C type chemokine. Binds to MIP-3-alpha/LakC and subsequently transduces a signal by increasing the intracellular calcium ions level.
-!- SUBCELLULAR LOCATION: Integral membrane protein.
-!- SIMILARITY: Belongs to family 1 of G-protein coupled receptors.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   30-MAY-2000 (Rel. 39, Created)

"CDMA cloning of a G-protein-coupled receptor expressed in rat spinal cord and brain related to chemokine receptors.";

Neurosci. Lett. 169:85-89(1994).

-I FUNCTION: Receptor for the CX2C chemokine fractalkine and mediates both its adhesive and migratory functions.

-I SUBCELDIAR LOCATION: Integral membrane protein.

-I TISSUE SPECIFICITY: Most abundant in adult spinal cord, brain, kidney, gut, uterus and testes.

-I PTM: This protein is not N-glycosylated which is unusual for G-
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Eukaryota; Metazoa; Chordata; Craniata; Vertebrata; Euteleostomi;
